Mark scheme

---

6360

June 2018

---

Version/Stage: 1.0 Final

---

---

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from [aqa.org.uk](http://aqa.org.uk)

**Key to mark scheme abbreviations**

M	mark is for method
m or dM	mark is dependent on one or more M marks and is for method
A	mark is dependent on M or m marks and is for accuracy
B	mark is independent of M or m marks and is for method and accuracy
E	mark is for explanation
✓ or ft or F	follow through from previous incorrect result
CAO	correct answer only
CSO	correct solution only
AWFW	anything which falls within
AWRT	anything which rounds to
ACF	any correct form
AG	answer given
SC	special case
OE	or equivalent
A2,1	2 or 1 (or 0) accuracy marks
-x EE	deduct x marks for each error
NMS	no method shown
PI	possibly implied
SCA	substantially correct approach
c	candidate
sf	significant figure(s)
dp	decimal place(s)

**No Method Shown**

Where the question specifically requires a particular method to be used, we must usually see evidence of use of this method for any marks to be awarded.

Where the answer can be reasonably obtained without showing working and it is very unlikely that the correct answer can be obtained by using an incorrect method, we must award **full marks**. However, the obvious penalty to candidates showing no working is that incorrect answers, however close, earn **no marks**.

Where a question asks the candidate to state or write down a result, no method need be shown for full marks.

Where the permitted calculator has functions which reasonably allow the solution of the question directly, the correct answer without working earns **full marks**, unless it is given to less than the degree of accuracy accepted in the mark scheme, when it gains **no marks**.

**Otherwise we require evidence of a correct method for any marks to be awarded.**

**General Notes for MS1B**

- GN1** There is no allowance for misreads (MR) or miscopies (MC) unless specifically stated in a question.
- GN2** In general, a correct answer (to accuracy required) without working scores full marks but an incorrect answer (or an answer not to required accuracy) scores no marks.
- GN3** In general, a correct answer (to accuracy required) without units scores full marks.
- GN4** When applying AFWF, a slightly inaccurate numerical answer that is subsequently rounded to fall within the accepted range cannot be awarded full marks.
- GN5** Where percentage equivalent answers are permitted in a question, then penalise by **one accuracy mark** at the first **correct** answer but only if no indication of percentage (eg %) is shown.
- GN6** In questions involving probabilities, do **not** award **accuracy** marks for answers given in the form of a ratio or odds such as 13/47 given as 13:47 or 13:34 .
- GN7** Accept decimal answers, providing that they have **at least two** leading zeros, in the form  $c \times 10^{-n}$  (eg 0.00321 as  $3.21 \times 10^{-3}$ ).
- GN8** **Where a candidate's response to a part of a question is simply to label the part (eg (d)(i)) with nothing else (ie no attempt at a solution), then this is still treated as a response and marked as 0 rather than NR. Also, deleted work, if not replaced, should be marked and not treated as NR.**

**Specific Notes for MS1B**

1. **Question 1**
2. **Question 2**
3. **Question 3**
4. **Question 4**
5. **Question 5**
6. **Question 6**
7. **Question 7**

Q	Solution	Mark	Total	Comment
<b>1</b>	<b>Emboldened words (at least one chosen from emboldened options) are required in parts (a) &amp; (d)</b>			
(a)(i)	Mode: <b>5</b> is <b>minimum/smallest/lowest</b> value	B1	<b>2</b>	
(ii)	Range: is <b>affected/skewed/distorted/increased /large/wide/big/high</b> due to value of <b>95</b>	B1		
<b>Notes</b>	1 Use only of “inaccurate or incorrect or wrong OE” ⇒ B0 2 Reasons must relate specifically to the data in the question; general comments (eg mode does not use all values, large spread or range, range only uses maximum and minimum values) ⇒ B0 3 Ignore additional comments, even if incorrect or inaccurate 4 If parts not labelled, then reasons must clearly reference mode or range			
(b)	Median = <b>17</b>	B1	<b>2</b>	CAO; ignore method
	Interquartile range (22 – 10) = <b>12</b>	B1		CAO; ignore method
(c)	Mean = <b>20</b>	B1	<b>3</b>	CAO; see Note 2 ( $\sum x = 460$ ) & ( $\sum x^2 = 16608$ )
	Standard deviation ( $n$ ) = <b>17.9 to 18.0</b>	B2		AWFW (17.94678) Do not ignore method; see Note 3
	Standard deviation ( $n-1$ ) = <b>18.3 to 18.4</b>	(B1)		AWFW (18.35013)
<b>Notes</b>	1 Where no method is shown for mean and standard deviation simply mark numerical values stated 2 If an incorrect method for mean is followed by a numerically correct value ⇒ B1 3 If an incorrect method for standard deviation is followed by a numerically correct value ⇒ 2 solutions so B2 becomes B1 or (B1) becomes (B0)			
(d)	Data is <b>not symmetrical</b> or data is (positively) <b>skewed</b>	B1	<b>2</b>	Reference only to ‘normal’ ⇒ B0
	Median and IQR or measures/results in (b) or “they” <b>ARE NOT affected/skewed/distorted/influenced/changed</b> by <b>95/maximum/outlying/extreme/large</b> value  <b>OR</b> Mean and SD or measures/results in (c) <b>ARE affected/skewed/distorted/influenced/changed</b> by <b>95/maximum/outlying/extreme/large</b> value	B1		
<b>Note</b>	1 Comments simply about the data (eg large spread) and/or comments or comparisons of measures (eg large Sd or mean > median or Sd > IQR) ⇒ B0			
		<b>Total</b>	<b>9</b>	

Q	Solution	Mark	Total	Comment
<b>2</b>	<b>Emboldened words are required in part (b)(ii)</b>			
(a) (i)	$r = \underline{\underline{-0.75 \text{ to } -0.95}}$	B1		AWFW (–0.89935)
(ii)	$r = \underline{\underline{-0.20 \text{ to } +0.20}}$	B1	<b>2</b>	AWFW (–0.00743)
(b) (i)	$r = \underline{\underline{0.00375}}$ $r = \underline{\underline{0.0037 \text{ to } 0.0038}}$ $r = \underline{\underline{0.003 \text{ to } 0.004}}$ <b>or</b> $\sum_{t=290} t = 460$ $\sum t^2 = 9326$ $\sum tc = 13346.27$ $\sum c = 460$ $\sum c^2 = 24212.2686$ <b>or</b> $S_{tt} = 916$ $S_{cc} = 3052.2686$ $S_{tc} = 6.27$ Attempt at substitution into a <b>correct</b> corresponding formula for $r$ $r = \underline{\underline{0.00375}}$	B3 (B2) (B1)		CAO; (see GN7) (0.0037498) AFWW; (see GN7) AFWW; (see GN7)
		(M1)		Correct attempt at 5 summations (Look for $\sum tc = \sum t \sum c = 133400$ )
		(m1)		Correct attempt at 3 summations
		(A1)	<b>3</b>	CAO; (see GN7)
(ii)	There is <b>no</b> (linear) correlation	Bdep1		Dep on $r = 0.003$ to $0.004$
<b>Notes</b>	1 Statements <b>must</b> include the word “no” without qualification or additional phrases <b>together with only</b> “correlation” or “association” or “relationship” 2 Use of any of the following terms (even in conjunction with “no”): “almost or virtually or low or little or small or weak or mild or slightly or fairly or pretty or significant” $\Rightarrow$ Bdep0			
	between  the <b>time</b> and cost of items	Bdep1	<b>2</b>	Dep on $r = -0.99$ to $+0.99$
<b>Notes</b>	1 Accept order of “cost of items” and “time” 2 “As time spent increases, cost of items purchased remains the same” $\Rightarrow$ Bdep0 Bdep1 3 “As time/ $t$ increases, cost/ $c$ remains the same” $\Rightarrow$ Bdep0 Bdep0 4 Any suggestion that “as time spent increases, cost of items purchased increases” $\Rightarrow$ Bdep0 Bdep0

<b>Note</b>	1 If award of M0 or M1 is followed by a numerically correct CI $\Rightarrow$ possibly 2 solutions			
<b>SC</b>	1 NMS for CI then (1065, 1085) $\Rightarrow$ 4 marks; (1065.0, 1085.0) (AWRT) $\Rightarrow$ B3			
<b>(ii)</b>	CI includes 1072 or $1072 \in \text{CI}$  Hence <b>accept/agree with claim</b> that $\mu = 1072$	BF1  Bdep1	<b>2</b>	F on (a)(i); providing LCL < 1072 < UCL and 1072 is <b>not used</b> in CI construction  OE; dependent on BF1
<b>Notes</b>	1 Statement must <b>clearly</b> indicate that “1072 is <b>within</b> the <b>corresponding</b> CI” OE 2 Statements of the form “It/this/mean/value/etc is within the (corresponding) CI” $\Rightarrow$ BF0 Bdep0 3 Statements of the form “1072 is within 95% of the data/values/millilitres/bottles” $\Rightarrow$ BF0 Bdep0 4 Statements such as “Claim is likely to be reasonable/supported/possible/valid/true/right/correct/accurate” $\Rightarrow$ Bdep1 but only providing BF1 scored			
<b>(b)</b>	$98\% \Rightarrow z = \underline{2.32 \text{ to } 2.33}$  $\left( \begin{array}{c} 1075 \\ \mu \text{ or } \bar{x} \end{array} \right) + \left( \begin{array}{c} 2.32 \text{ to } 2.33 \\ 2.57 \text{ to } 2.58 \end{array} \right) \times \frac{36}{\sqrt{n}} = 1080$ and $\left( \begin{array}{c} 1075 \\ \mu \text{ or } \bar{x} \end{array} \right) - \left( \begin{array}{c} 2.32 \text{ to } 2.33 \\ 2.57 \text{ to } 2.58 \end{array} \right) \times \frac{36}{\sqrt{n}} = 1060$ ----- or $1070 + \left( \begin{array}{c} 2.32 \text{ to } 2.33 \\ 2.57 \text{ to } 2.58 \end{array} \right) \times \frac{36}{\sqrt{n}} = 1080$ ----- or $1070 - \left( \begin{array}{c} 2.32 \text{ to } 2.33 \\ 2.57 \text{ to } 2.58 \end{array} \right) \times \frac{36}{\sqrt{n}} = 1060$	B1  M1		AFWF (2.32635)  Use of $\mu$ or $\bar{x}$ can score 4 marks Use of 1075 $\Rightarrow$ B1 M1 max Use of anything else $\Rightarrow$ B1 max
	Thus: $\left( \begin{array}{c} 2.32 \text{ to } 2.33 \\ 2.57 \text{ to } 2.58 \end{array} \right) \times \frac{36}{10} = \sqrt{n}$ $n = 69.76 \text{ to } 70.36 \Rightarrow \underline{70 \text{ or } 71}$	m1  A1	<b>4</b>	Re-arranging for $\sqrt{n}$ or $n$  CAO either (70.14)
<b>SC</b>	1 Method of T&I; $z = 2.32 \text{ to } 2.33 \Rightarrow$ B1; evaluation of $\left( \begin{array}{c} 2.32 \text{ to } 2.33 \\ 2.57 \text{ to } 2.58 \end{array} \right) \times \frac{36}{\sqrt{n}}$ with a numerical integer value for $n \Rightarrow$ M1; since $2.32 \times 36 / \sqrt{64} = 10.44(10)$ and $2.33 \times 36 / \sqrt{77} = 9.56(10)$ then $n = \text{int}(64 \text{ to } 77) \Rightarrow$ A1 but $n = 70 \text{ or } 71 \Rightarrow$ A2
